The Task

- Model in Alloy a dynamic domain involving several rovers moving on a two-dimensional space

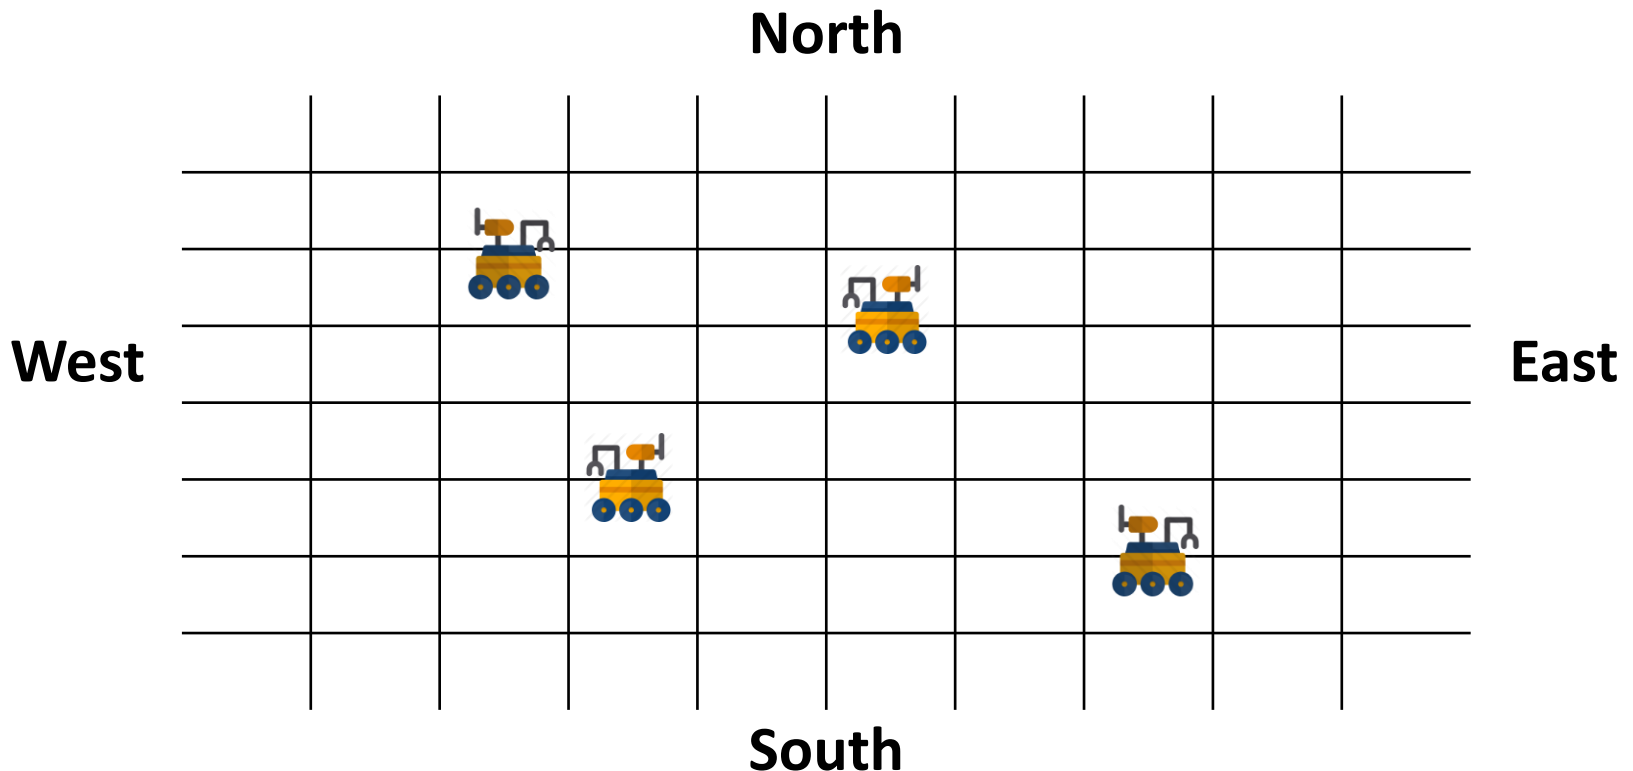

Facts about the System

- There are **one or more** identical rovers
- Each rover can be **turned on** and **off**

Facts about the System

- Each rover can only **move forward**, or **turn in place to the left** or **to the right**

Facts about the System

- We will **model** both **static and dynamic aspects** of the system

Simplifying Modeling Choices

- 1) We adopt an **interleaving model of time**: only one action is performed, by one of the rovers, at a time
- 2) The two dimensional space is **a discrete grid**, with
 - the **X-coordinate** growing indefinitely in the West-East direction and
 - the **Y-coordinate** growing indefinitely in the South-North

Simplifying Modeling Choices

- 3) Rovers move only **by one position at a time** and along the X,Y axes.

Simplifying Modeling Choices

- 4) A rover turns left or right by exactly 90 degrees
- 5) A rover can move only in the direction it is facing

Signatures and Fields

```
open util/ordering [Time] as T  
open util/ordering [Coor] as C
```

-- Coordinates, strictly ordered

```
sig Time {}
```

```
sig Coor {}
```

-- Position models the individual positions

-- in the grid

```
sig Position { x: Coor, y: Coor}
```

Signatures and Fields

-- The four cardinal directions

abstract sig Direction {}

one sig North, South, East, West extends
Direction {}

Signatures and Fields

```
some sig Rover {  
  -- Direction rover is facing at any one time  
  dir: Direction one -> Time,  
  
  -- Rover's position at any one time  
  pos: Position one -> Time,  
  
  -- Rover's on/off status at any one time  
  on: set Time  
}
```

Operators

Turn on

Turn off

Turn left

Turn right

Go

Turn On Operator

```
pred turn_on [rov: Rover, t,t': Time] {  
  -- Pre-condition  
  Rover is off at time t (!is_on)  
  
  -- Post-condition  
  Rover is on at time t' (is_on)  
  
  -- Frame condition  
  All other rovers stay on or off as they were (no_on_changes)  
  No rover changes direction (no_direction_changes)  
  No rover changes position (no_position_changes)  
}
```

Turn Left Operator

```
pred turn_left [rov: Rover, t,t': Time] {  
  -- Pre-condition  
  Rover is on at time t (is_on)  
  
  -- Post-condition  
  Direction Changes (could be North, South, East, or West)  
  
  -- Frame condition  
  All rovers stay on or off as they were (no_on_changes)  
  No other rover changes direction (no_direction_changes)  
  No rover changes position (no_position_changes)  
}
```

If-Then-Else in Alloy

Expr_1 (\Rightarrow , *implies*) Expr_2 *else* Expr_3

- Expr_1 is a Boolean expression
- Expr_2 and Expr_3 can be either Boolean or Set expression

E.g. *let* parents_in_law =
 (John.spouse = Mary \Rightarrow Mary.parents
 else John.spouse = Lily \Rightarrow Lily.parents
 else none)

Go Operator

```
pred go[rov: Rover, d: Direction, t,t': Time] {
```

```
-- Pre-condition
```

```
Rover is on at time t (is_on)
```

```
d is rover's direction at time t
```

```
-- Post-condition
```

```
Position Changes (could move towards North, South, East, or  
West)
```

```
(next_pos[p: Position, d: Direction]: Position)
```

```
-- Frame condition
```

```
All rovers stay on or off as they were (no_on_changes)
```

```
No rover changes direction (no_direction_changes)
```

```
No other rover changes position (no_position_changes)
```

```
}
```

The Module Ordering

```
// return the predecessor of e, or empty set if e is
// the first element
fun prev [e: S]: 1one S { e.(Ord.Prev) }

// return the successor of e, or empty set of e is
// the last element
fun next [e: S]: 1one S { e.(Ord.Next) }
```

Transition System

```
pred System {  
    init[T/first]  
    all t: Time – T/last | transitions[t, T/next[t]]  
}
```

- Facts

- P0 is the origin position of the coordinate system

- Init

- Rover R1 is at the origin position, facing East and turned off

- The other rovers, if any, are at a different position than R1's

- Transitions

- Some rover turn on, off, left, right, or go

System Goal

```
pred goal[t: Time]{  
  -- R1 is not at the origin  
  R1.pos.t != P0  
  -- R1 is facing north  
  R1.dir.t = North  
}  
pred goalCheck{  
  one Rover  
  System  
  some t : Time | goal[t]  
}
```
